Put ELECTRICITY at your Saw Handle

Your life is too short for you to spend time and muscle pushing a saw that hasn't been improved in principle for 4,000 years. Put electricity at your saw handle. Buy Skilsaw for yourself—for your men—for your business. It will save time, muscle and money.

The saw is a circular saw—product of America's most famous saw maker—driven by a powerful G. E. universal motor through a plank, up to 2 3/4 inch thickness, at 20 times the rate of the fastest hand sawing.

Skilsaw weighs but nineteen lbs. It is compact, easy to handle. Wherever there is electric light current—alternating or direct—you can operate a Skilsaw.

Carry Skilsaw right to the job. No need to carry work to it. In many places where an ordinary saw is useless, Skilsaw can be used. It requires less elbow room—and no "elbow grease." It can be adjusted to cut to a set depth. In hundreds of uses, Skilsaw has speedily paid for itself—has often done so on one job.

You will find the sturdily built Skilsaw used in the maintenance

department of factories and large buildings, in the equipment of big contractors, in the shipping department of manufacturers, jobbers and department stores and also among the tools of carpenters and millwrights.

You can hear its hum in the dark galleries of mines, you can see it ripping through the concrete forms on the upper floors of skyscrapers. And nowhere would the user or owner part with Skilsaw for several times its cost unless he could get another—at once.

Send the Coupon

Do your work more easily, more quickly. Mail the coupon for more complete information about Skilsaw. Learn why individual carpenters own one, why a big contractor buys eighteen, and why a great industrial concern will order twenty-two.

Make up your mind today to replace muscle power with horse power. Learn all about Skilsaw. See one at work. Consult a user. Ask the distributor nearest you for details and prices or clip the coupon now.

Read these Uses

1. Industrial plant maintenance and repair work. Alterations to partitions. Building shelving in large factories.
2. Cutting out sections of roof decks, walls, flooring, and steamship deck sheathing—without cutting into the material beneath.
3. Reclaiming box and crate lumber in shipping departments, often making the purchase of new lumber unnecessary.
4. Making concrete forms. On Wacker Drive, Mid-Continent Construction Co. is using one dozen Skilsaws.
5. Cutting rafters, joists, studding, lagging, bridging, sheathing, and stair stringers. A veteran carpenter in a western suburb said he would be too old to work if he didn't have a Skilsaw to do his sawing.
6. Repairing freight cars.
7. Trimming doors, sash and interior trim.
